

AUSTRIAN BOOK ABOUT THE LAVAL STEAM TURBINE, WITH A RAISED, ART DECO IMAGE ON THE COVER

A German-language book about the award-winning steam turbine invented by Swedish engineer Karl Gustaf Patrik de Laval (1845-1912). The hardcover volume is illustrated with numerous diagrams and photographic images. The front cover is adorned with a polychrome, Art Deco-style illustration in low relief of an allegorical figure of steam powering the turbine while flames shoot up from below. The book is in very good condition aside from a little dirt on the grey cloth-covered binding.
